

119TH CONGRESS
1ST SESSION

H. RES. 175

Recognizing the seriousness of polycystic ovary syndrome (PCOS) and expressing support for the designation of the month of September as “PCOS Awareness Month”.

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 27, 2025

Mr. DAVID SCOTT of Georgia (for himself, Mr. FITZPATRICK, Ms. WASSERMAN SCHULTZ, Ms. SCHAKOWSKY, Mr. BACON, Ms. BARRAGÁN, Mr. BOYLE of Pennsylvania, Mrs. CHERFILUS-McCORMICK, Ms. CHU, Mr. COHEN, Mrs. WATSON COLEMAN, Mr. CONNOLLY, Ms. OCASIO-CORTEZ, Ms. DEAN of Pennsylvania, Ms. DELBENE, Mr. FOSTER, Mrs. HAYES, Mr. JOHNSON of Georgia, Mr. LARSON of Connecticut, Ms. MCBRIDE, Ms. MCCOLLUM, Mrs. McIVER, Ms. MENG, Ms. MOORE of Wisconsin, Mr. MULLIN, Ms. NORTON, Mr. POCAN, Ms. STANSBURY, Ms. SEWELL, Ms. TITUS, Ms. VELÁZQUEZ, Ms. CLARKE of New York, and Mr. TONKO) submitted the following resolution; which was referred to the Committee on Energy and Commerce

RESOLUTION

Recognizing the seriousness of polycystic ovary syndrome (PCOS) and expressing support for the designation of the month of September as “PCOS Awareness Month”.

Whereas polycystic ovary syndrome (PCOS) is a common health problem among women and girls involving a hormonal imbalance;

Whereas there is no universal definition of PCOS, but researchers estimate that 5,000,000 to 10,000,000 women

in the United States are affected by the condition, and prevalence estimates range from 8 to 13 percent of women globally;

Whereas the most recent published data, a 2004 study, estimates the annual burden of PCOS in the United States is \$4,360,000,000, and this figure pertains to women's reproductive years alone and does not consider the cost of other comorbidities, including obstetrical complications or the cost of metabolic morbidities in post-menopause or adolescence;

Whereas PCOS can affect girls from the onset of puberty and throughout the remainder of their lives;

Whereas the symptoms of PCOS include infertility, irregular or absent menstrual periods, acne, weight gain, thinning of scalp hair, excessive facial and body hair growth, numerous small ovarian cysts, pelvic pain, and mental health problems;

Whereas women with PCOS have higher rates of psychosocial disorders, including depression, anxiety, bipolar disorder, and eating disorders, and are at greater risk for suicide;

Whereas adolescents with PCOS often are not diagnosed, many of whom have metabolic dysfunction and insulin resistance, which can lead to type 2 diabetes, cardiovascular disease, obstructive sleep apnea, nonalcoholic fatty liver disease, and endometrial cancer at a young adult age;

Whereas PCOS is the most common cause of female infertility;

Whereas PCOS in pregnancy is associated with increased risk of gestational diabetes, preeclampsia, pregnancy-induced

hypertension, preterm delivery, cesarean delivery, miscarriage, and fetal and infant death;

Whereas women with PCOS are at increased risk of developing high blood pressure, high cholesterol, stroke, and heart disease (the leading cause of death among women);

Whereas women with PCOS have a more than 50 percent chance of developing type 2 diabetes or prediabetes before the age of 40;

Whereas women with PCOS may be at a higher risk for breast cancer and ovarian cancer, and have a 3 times higher risk for developing endometrial cancer compared to women who do not have PCOS;

Whereas research has found genetic evidence of a causal link to depression in PCOS;

Whereas research has found genetic correlations with obesity, fasting insulin, type 2 diabetes, lipid levels, and coronary artery disease, indicating shared genetic architecture between metabolic traits and PCOS;

Whereas adolescents with PCOS are at markedly increased risk for type 2 diabetes, fatty liver disease, and heart disease;

Whereas PCOS negatively alters metabolic function independent of, but exacerbated by, increased BMI;

Whereas an estimated 50 percent of women with PCOS are undiagnosed, and many remain undiagnosed until they experience fertility difficulties or develop type 2 diabetes or other cardiometabolic disorders;

Whereas the cause of PCOS is unknown, but researchers have found strong links to a genetic predisposition, and

significant insulin resistance, which affects up to 70 percent of women with PCOS; and

Whereas there is no known cure for PCOS: Now, therefore, be it

1 *Resolved*, That the House of Representatives—

2 (1) recognizes polycystic ovary syndrome
3 (PCOS) as a serious disorder that impacts many as-
4 pects of health, including cardiometabolic, reproduc-
5 tive, and mental health as well as quality of life;

6 (2) supports the goals and ideals of PCOS
7 Awareness Month, which are to—

8 (A) increase awareness of, and education
9 about, PCOS and its connection to
10 comorbidities such as type 2 diabetes,
11 endometrial cancer, cardiovascular disease, non-
12 alcoholic fatty liver disease, and mental health
13 disorders among the general public, women,
14 girls, and health care professionals;

15 (B) improve diagnosis and treatment of
16 the disorder;

17 (C) disseminate information on PCOS di-
18 agnosis, treatment, and management including
19 prevention of comorbidities such as type 2 dia-
20 betes, endometrial cancer, cardiovascular dis-
21 ease, nonalcoholic fatty liver disease, and eating
22 disorders; and

1 (D) improve quality of life and outcomes
2 for women and girls with PCOS;

3 (3) recognizes the need for further research,
4 improved treatment and care options, and a cure for
5 PCOS;

6 (4) acknowledges the struggles affecting all
7 women and girls afflicted with PCOS residing within
8 the United States;

9 (5) urges medical researchers and health care
10 professionals to advance their understanding of
11 PCOS in order to research, diagnose, and provide
12 assistance to women and girls with PCOS; and

13 (6) encourages States, territories, and localities
14 to support the goals and ideals of PCOS Awareness
15 Month.
